

Marijn Bent

Technical lead & product-minded developer

marijn@marijnbent.nl | +31 6 8105 3848
marijnbent.nl | github.com/marijnbent

I build web products and the systems behind them. At WordProof I combined backend development with leading a distributed engineering team. My work spans reusable integrations, APIs, deployment and migration tooling, business websites and personal applications. I also teach technical subjects and enjoy helping people understand how things work.

Selected experience

WordProof / Co-founder & technical lead

Built the initial platform and led a distributed frontend/backend team while continuing to implement core features. Developed Laravel services for queued timestamp processing, billing and PDF certificates, and migrated the application to AWS/serverless infrastructure. Built reusable PHP SDKs and embeddable certificate components. Implemented the Yoast SEO integration, built WordPress and Shopify integrations, and collaborated on Wix integration work. Coordinated technical planning and delivery with the team and external engineers.

Web platform engineering / Architecture & delivery

Developed an API-first platform with a separate serving runtime, schema migrations and release checks. Implemented authentication, request validation, idempotent processing and deployment diagnostics. Added checkpointed migration tooling and review/preview steps before publishing changes.

Studiozoek / Business owner & developer

Build and run business websites and the tools behind them. Work includes a Hub/CRM, campaign and review workflows, supporting web infrastructure and operational tooling.

Eduvision / blockchain education / Technical teaching

Prepared and delivered practical blockchain teaching, including Bitcoin, Ethereum, wallets, transactions, consensus and smart contracts. Developed interactive exercises and used course reflections to improve the sequence and clarity of explanations.

Blocklab / Open Energy Hub / Thesis & collaborative engineering

Worked on “The Smart Smart Meter” thesis and collaborated on an open-source distributed database for smart-meter data. Contributed dashboard and API work, Raspberry Pi setup and data handling.

Selected projects

Obsidian Print / Public plugin / TypeScript

Printing for Obsidian notes, selections and folders, with platform-specific behavior on desktop and mobile.

Prepped / Personal application / Astro, React, SQLite

Self-hosted recipe management with imports, cook logs, meal planning and household sharing. Recent work includes improving the ingredient layout.

BookLite / Maintained fork / TypeScript, React, Fastify

Maintain a fork of a self-hosted digital library with Kobo synchronization, metadata and reading tools. My recent work includes settings and runtime-safety improvements.

Public contributions

Yeast SEO / Integration engineering

Authored the WordProof integration restoration and follow-up fixes across SDK behavior, authentication and editor support, working through upstream review and acceptance tests.

Schema.org / Timestamping proposal

Co-proposed a content-timestamping approach with Yeast, WordProof and structured-data specialists. Contributed analysis of hash verification and cross-chain identifiers.

Fastpotify / Merged macOS contribution

Contributed a Rust/macOS window-lifecycle fix for reopening the player after closing its window.

Volunteering & languages

Lighthouse Support & Kompaskamp / Project review & facilitation

Participate in nonprofit project evaluation and coordination at Lighthouse Support. Co-head leadership for Kompaskamp in 2026. Languages: Dutch and English.

Technical focus

PHP / Laravel; JavaScript / TypeScript; Vue / React; APIs and reusable SDKs; queues and billing; AWS/serverless; PostgreSQL; deployments, migrations and diagnostics; team coordination and technical teaching.
